PS16F

PULL STUD

Size: 52mm Pull Studs

Material Construction: S7 Tool Steel

The PS16F is necessary to use any 5th Axis 52mm base. The 52mm spacing on 5th Axis vises and adapters allow for compatibility with other competitive systems.

*Please note that pull studs must stay with the corresponding company's base plate. If you are using a 5th Axis 52mm RockLock base plate you will need 5th Axis pull studs (PS16F). The spacing and thread allows for the top tooling to be interchangeable between the competitive systems.

PS16F-PY

SINGLE PULL STUD WITH POKA-YOKE INSERT

Size: 52mm Pull Studs

Material Construction: S7 Tool Steel

Poka-yoke is a Japanese term that means "mistake-proofing" or "inadvertent error prevention". The PS16F-PY is a single modified pull stud with aluminum ring. The ring is placed inside one of the locating holes in the RockLock base, allowing for only the single poka-yoke pull stud to fit inside the locating hole with the corresponding ring. This will prevent operators from changing the orientation and misloading a part.

The V75100X is the most recent revision of our V75100 vise. Now equipped with 4 bolt jaw mounting to reduce jaw lift providing robust clamping and sharper teeth for a better bite.

This small compact 5 axis vise was created to be used on very small office type mills and micro pallet changers. We took the technology in the V552 and V562 and shrunk it down to create what is now the V75100X.

V75150X Metric

Size: 75mm x 150mm x 56mm
Jaw Width: 75mm

 0 - 92.8mm
Reverse Jaws Clamping Range:
 38.5mm - 128.8mm
Clamping Force: 13.5 kN @ 60 Nm
Torque Vise Assembly: 60 Nm

The V75150X was created out of customer demand for a small self-centering vise with an increased clamping range over the popular V75100X vise. The base is 50mm longer than the standard V75100X, allowing the max workpiece size to increase from 76mm to 128mm. The V75150X maintains the same 75mm jaw width for maximum tool clearance. The new 4 bolt jaw mounting design reduces jaw lift and the sharper teeth provide a superior bite in raw material.

READY TO ROCK SETUP

Example shown for Haas VF-2/VF-3 [G154 Work Coordinates]

1. Starting with an empty machine table, install 5th Axis 3613S plates for your specific table. Thread bolts into t-nuts, but do not torque bolts.
2. Space plates 3" (76.2mm) apart from each other. Use a mallet to initially align and straighten plates.
3. Install master pallet (RL96-MP) in center position (P89, P92, P95, P98) to indicate straight. Once aligned and indicated straight, torque mounting bolts to torque specifications.
4. For every position, install master pallet and set X and Y axes with touch probe or indicator for each work offset position.
5. Set Z zero on the top mounting surface of the Rocklock 3613S base for all work **offsets**.
- 6. R2R system is ready to use.**
